

Paste Images as Base64Str

Paste images directly from clipboard into Markdown Documents in IntelliJ. Images files are deposited in a configurable directory relative to the markdown.

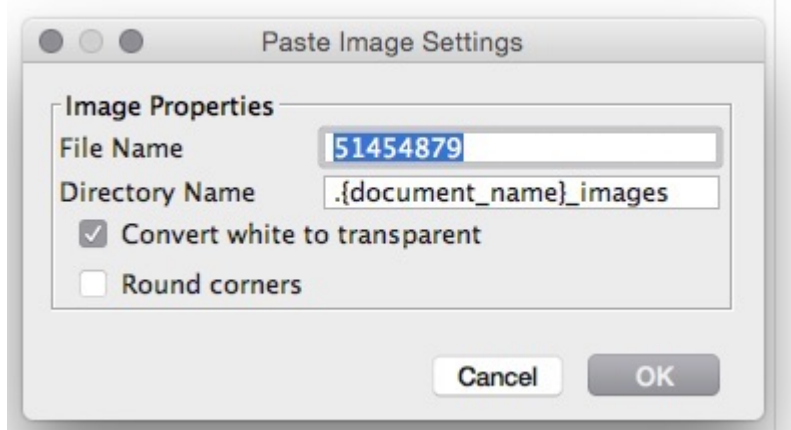

Installation

Use the plugin browser in IntelliJ to download the plugin.

It works best as extension to the [official Markdown support](#) extension provided by JetBrains.

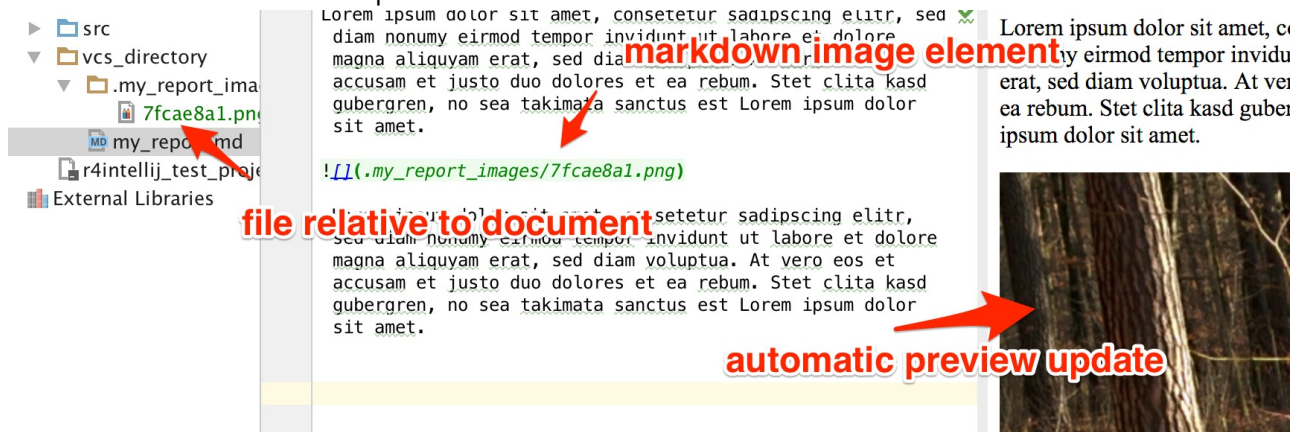

Usage

1. Copy an image to your clipboard. E.g by right-click + copy in your favorite browser or by doing **Command-Control-Shift-4** on a mac or **PrtScn** on windows10
2. Press **shift-ctrl-V** (or change the keybinding under `Preferences->Keymap->"Paste Image into

Markdown")

- optionally adjust file name (which defaults to a random value)
3. The plugin will deposit the file relative to your source-directory and insert the markdown image element at the current cursor position:

Created images will be added automatically to the VCS (if used). The plugin will remember the last directory pattern on a per file basis.

Support

Feel welcome to suggest new features or to report issues.

Add feature

由于使用Markdown时，粘贴图片时目前有三种方法

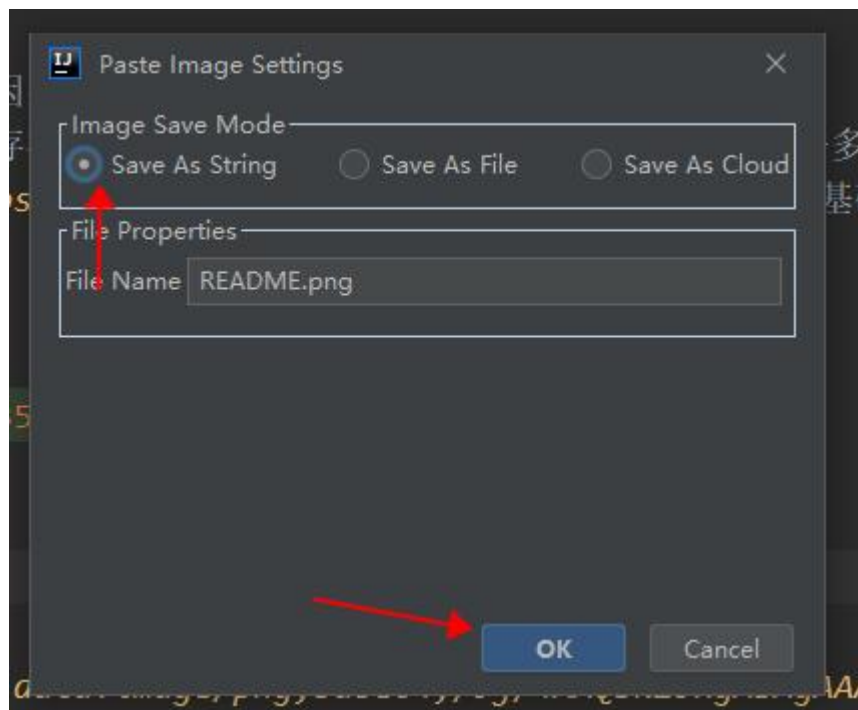

- 在图床上保存，比如青牛云、阿里云等 [Markdown Image Paste](#)
- 将图片保存在文件中 [Paste Image To Markdown](#)
- 将图片转换成base64String [plugin Paste Images as Base64Str](#)

在原有的基础上，个人感觉前两中可能有各种原因导致markdown不易保存，或相应的图片容易丢失 想使用第三种方法写markdown(不过该方法可能存在最后文件篇幅过长的问题),在idea插件中找了好多没有找着 所以我参考[Paste Image To Markdown](#)，并在这基础上完成[plugin Paste Images as Base64Str](#)的开发。

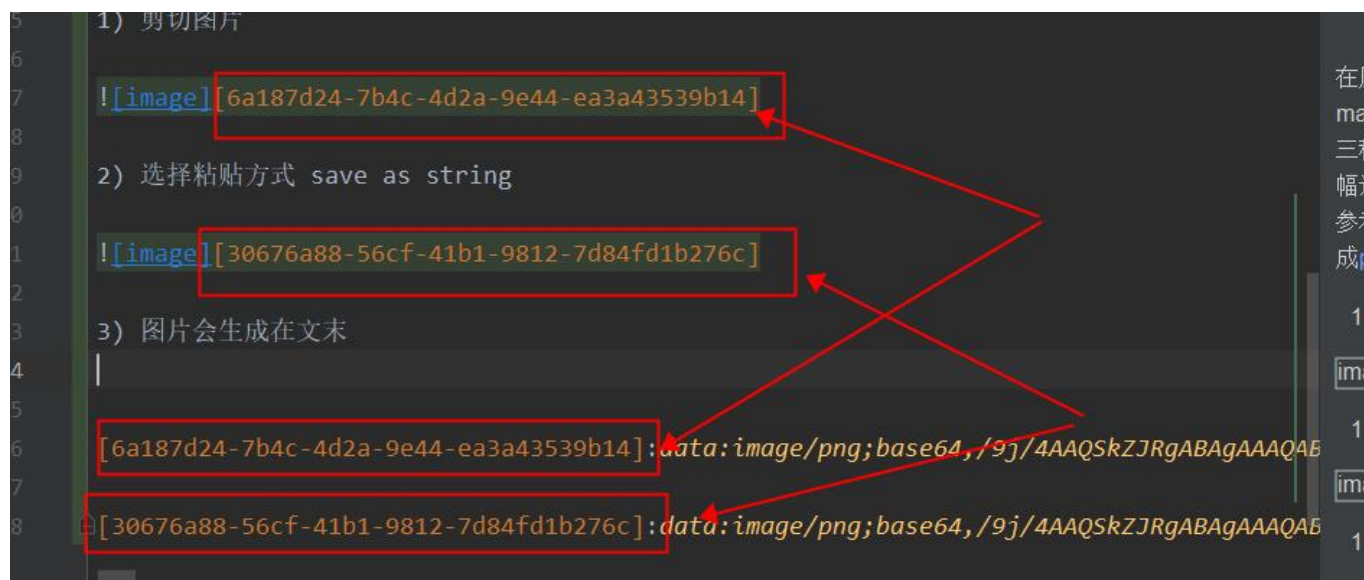

1. 剪切图片

2. 选择粘贴方式 save as string

3. 图片会生成在文末

myplugin

此版本的放在myplugin文件中，可直接导入使用，也可以自己修改后生成【该plugin功能只有图片转String】
